Covid 19 Total Antibodies

Unit	Result	Interpretation
COI < 1.0	Non-Reactive	Negative for Covid-19 antibodies
COI ≥ 1.0	Reactive	Positive for Covid-19 antibodies

Note:

1. Elecsys Anti SARS Cov2 is an immunoassay for the in vitro qualitative detection of antibodies to SARS COV-2 in human serum or plasma. The assay uses a recombinant protein representing the nucleocapsid (N) antigen.
2. Unlike viral detection by RTPCR or antigen detection that can detect acutely infected person, antibody test helps determine whether the individual is or was ever infected by SARS Cov 2 by measuring the host humoral immune response to the virus.
3. Antibodies most commonly become detectable after 2 weeks of onset of symptoms, serology is therefore NOT RECOMMENDED FOR DIAGNOSIS OF ACTIVE COVID 19 INFECTION.
4. Antibody test can be falsely negative if sample is collected too early in the course of disease.
5. There should be no change in clinical practice or use of relevant PPE by those who test positive for SARS COV-2 antibodies.
6. "This test is not for diagnosis of acute covid 19 infection and is meant for Sero Surveillance only".
